

context object (before the splice)

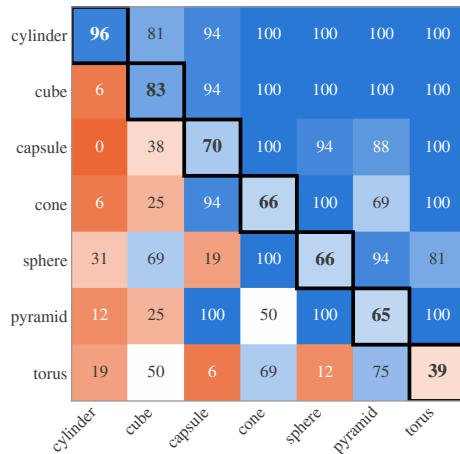

Object permanence

(a)

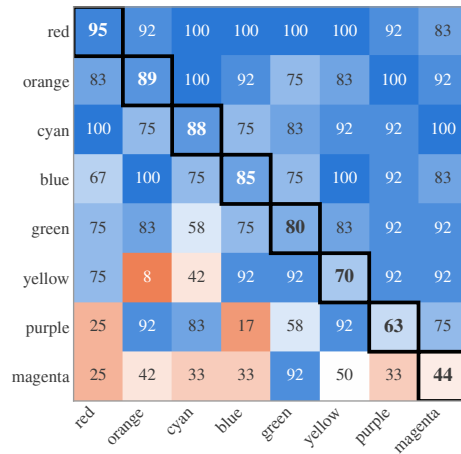

Shape

(b)

Colour

(c)

ROW = object before the splice. COLUMN = object in the impossible future. cell = violations caught (%).

BOXED DIAGONAL: A|A is the POSSIBLE clip — the reference every pair in that row is scored against, so it has no accuracy of its own. the box shows the row mean: how often the score keeps that object. dark row = the model holds it, pale row = the model loses it. [Moving (ramp), visible]
